

# Scholars GeoPortal API - Data Webpages Integration

# What and Why

---

Maintaining geospatial data pages is a pain.

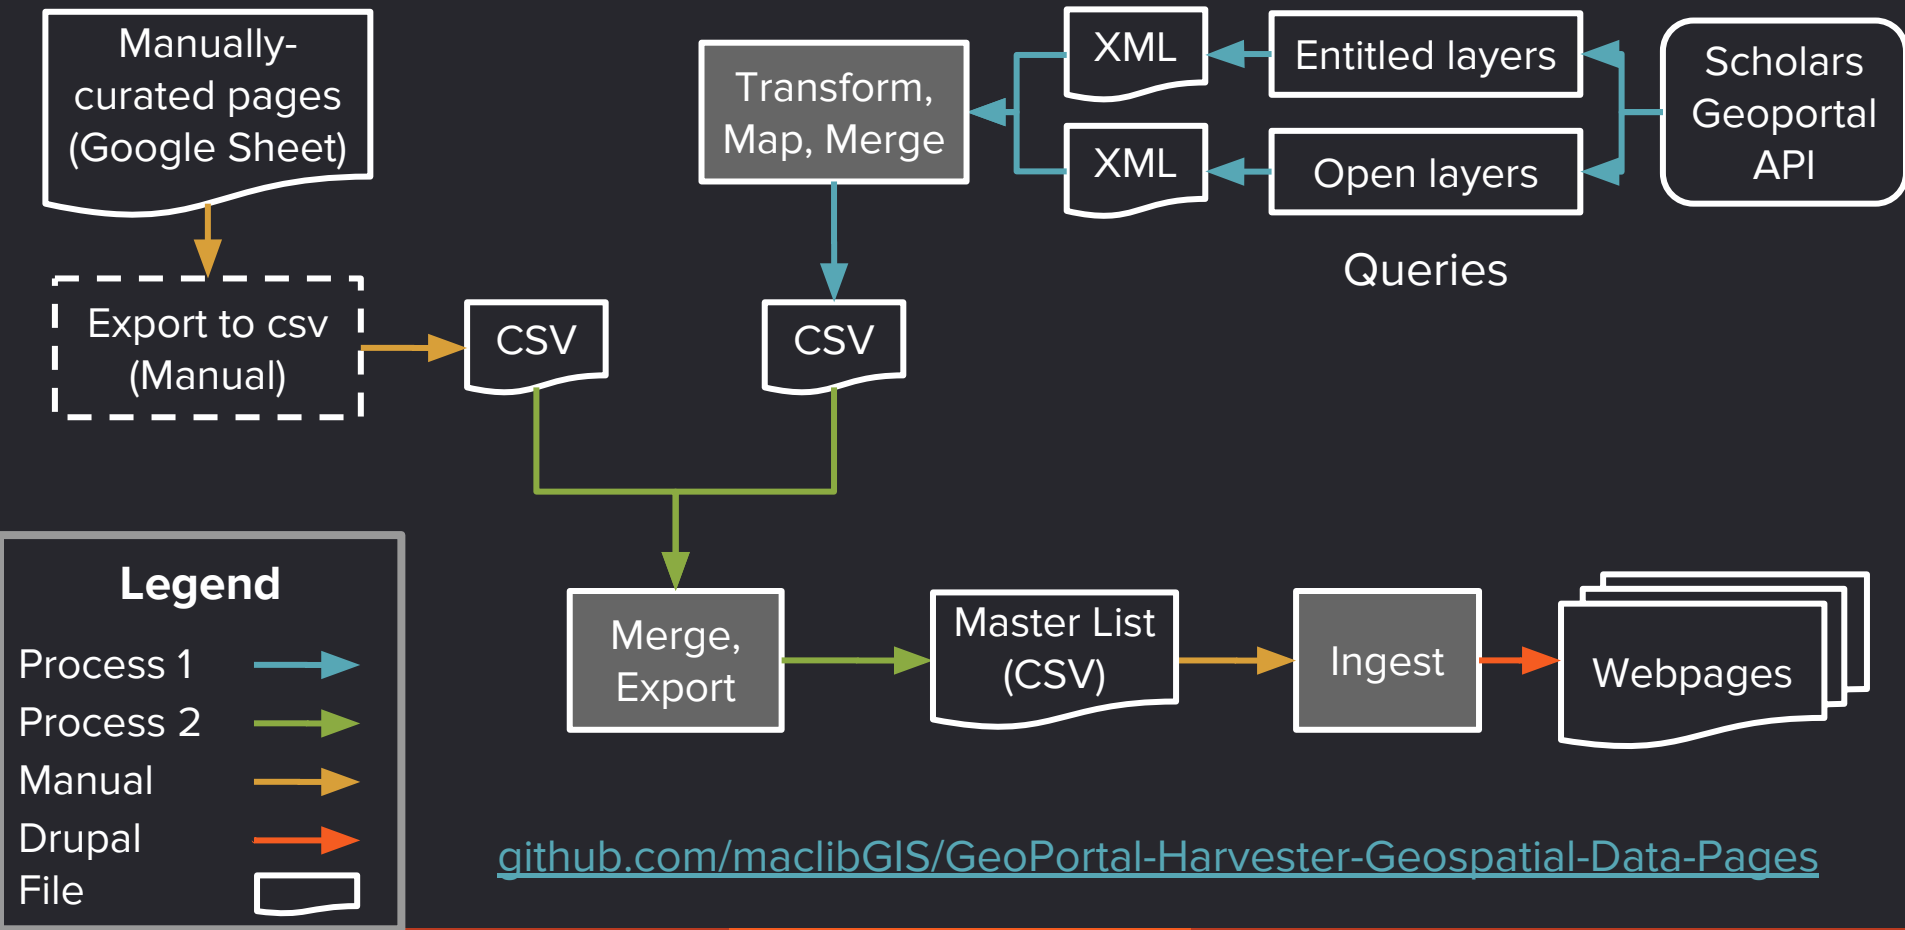

- **But,** having Google-indexed data pages helps connect users to data

Can we optimize this process by:

- automating the creation of data page content?
- auto-generating static, indexed pages for all GeoPortal layers available to McMaster students?

The solution:

- Use the SGP API to auto-build static geospatial data pages

## Census Tracts (CT), 1961 Census of Canada

### Sample:

**Author:** Statistics Canada

**Year:** 2011 - 2016

**Format:** Various geospatial formats available.

**Scale:**

**Projection:**

**Entry date:**

**File Size:**

**Who can use this data:** Public

**URL:** [http://geo.scholarsportal.info/#r/details/\\_uri@=873032683](http://geo.scholarsportal.info/#r/details/_uri@=873032683)

### Abstract:

This dataset contains the boundaries of all 301 Census Tracts (CT) in Toronto, Ontario, Canada for the 1961 Census.

Census tracts are small, relatively stable geographic areas that usually have a population of 2,500 to 8,000. They are located in census metropolitan areas and in census agglomerations with an urban core population of 50,000 or more from the previous census.

The shapefiles were created by the University of Toronto's Map and Data Library, using data from the original printed 1961 maps.
